

## Standard Sector Indicator Reference Sheet

---

### INDICATOR: Number of facilities that have not experienced a stock-out of key tracer drugs in the last 90 days

**STANDARD SECTOR**

**HEALTH SECTOR** 

**PROJECT AREA:** HIV/AIDS

**INDICATOR CODE:**

HE\_HIV\_214

**Type:** Outcome

**Unit of Measure:** Facility

**Disaggregation:** None

**Related Objective:** Improve the community environment to support people living with or affected by HIV/AIDS

#### Precise definitions

**Facilities:** Facilities that the PCV and their counterparts worked with to improve supply chain management (SCM) procedures. This should not be a once-off intervention, but rather an ongoing mentoring or onsite technical assistance/training. One facility should only be counted once during the fiscal year even though there may be multiple trainings. The number of individuals trained can be counted under indicators HE\_HIV\_202 and 203.

**Not experienced a stock out in the last 90 days:** The facility has had availability of the key tracer drugs every day for the last 90 days. The medicine cannot be damaged or expired and must be available to be distributed to patients. There should be routine observations (through physical counts performed or spot checks) of stock status for the products of interest. These observations of each product of interest should be documented systematically to ensure the information can be used to manage and predict future stock and ordering.

**Key tracer drugs:** For this indicator, not all medicines or supplies need to be tracked, but the facility should select three to five key commodities or drugs that are key for service delivery to monitor as a proxy of all drugs. This is in line with guidance from WHO, so a list of tracer drugs/commodities may already be defined for government reporting. The three to five tracer drugs are usually a subset of the National Essential Medicines List. For more information, see [http://www.who.int/selection\\_medicines/list/en/](http://www.who.int/selection_medicines/list/en/).

#### Data collection

**Tool:** Supply Chain Reporting Tool. This tool is a way for the PCV to summarize their data for entry into the VRT. The post or PCV can modify the Excel template as needed. When working at a facility, the PCV may want to use the Supply Chain Management Facility-level Tool, which tracks much more detailed information. The VRT only require summary data.

**Frequency of data collection and tracking:** Data should be tracked on an ongoing basis as PCVs implement training activities. Data should be aggregated and reported based on the post-determined reporting frequency.

#### Reporting

**To be counted for this indicator the following criteria must be met:**

- The Volunteer worked with the health facility's staff or their counterpart to implement at least one SCM improvement intervention.
- There was documentation to support the implementation of the intervention(s). The documentation shows improvement in at least one SCM improvement intervention.

**Note:** A facility may only be counted once as part of this indicator in a given fiscal year (October–September) but it may be counted again in a new fiscal year. Multiple SCM interventions may be implemented at the same health facility. If the same facility is eligible for measurement for another indicator, it may be counted for that indicator according to the guidelines in that indicator’s reference sheet.
